

For each problem, approximate the area under the curve over the given interval using 4 inscribed rectangles. You may use the provided graph to sketch the curve and rectangles.

5) $y = -x + 5$; $[-7, -5]$

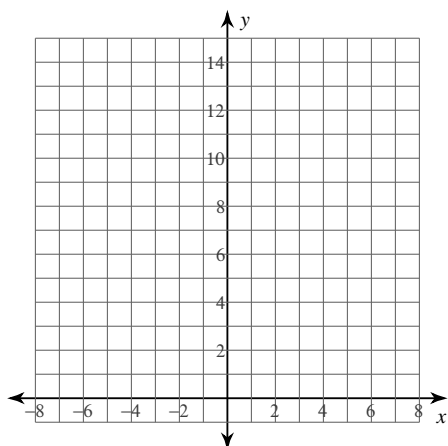

6) $y = \frac{2}{x}$; $[1, 5]$

For each problem, approximate the area under the curve over the given interval using 4 midpoint rectangles. You may use the provided graph to sketch the curve and rectangles.

7) $y = -x^2 + 2x + 11$; $[-1, 3]$

8) $y = x^2 - 2x + 3$; $[-1, 3]$
