

- 3) The base of a solid is the region enclosed by an ellipse with a major axis of 6 along the y -axis and a minor axis of 4. Cross-sections perpendicular to the x -axis are isosceles right triangles with the hypotenuse in the base.

For each problem, find the volume of the specified solid. You may use the provided graph to sketch the base.

- 4) The base of a solid is the region enclosed by a semicircle with a radius of 3, lying flat on the x -axis. Cross-sections perpendicular to the y -axis are squares.
