

Supplying the Space Station

Several different spacecraft, designed and flown by various nations that are part of the international partnership that makes the Space Station possible, make regular visits to the Space Station, delivering astronauts, spare parts, and critical supplies like food, water, and fuel. Some, like Russia's Progress and Soyuz, have been in service many years. Others, like Japan's H-2B Transfer Vehicle (HTV) and Europe's Automated Transfer Vehicle (ATV), were developed especially for the Space Station. Others still, like the United States's Dragon and Cygnus, are brand new. One, the Space Shuttle, has been retired after serving for many years as the Station's main construction and supply vehicle.

Unscramble the mixed up letters below to identify the many spacecraft that have kept the Space Station supplied, then do the same for the names of the nations or group of nations that provided them. Lastly, draw lines to connect each spacecraft to its provider!

(Hint: Some providers have produced more than one spacecraft!)
