

Using Statistical Models

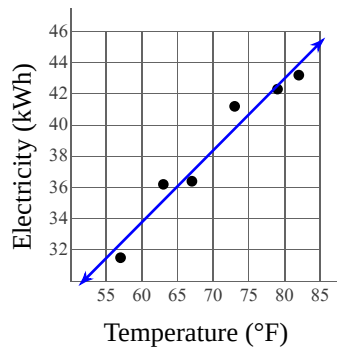

Date_____ Period____

- 1) The height and weight of adults can be related by the equation $y = 49.2x - 134$ where x is height in feet and y is weight in pounds.

- a) What does the slope of the line represent?
- b) What does the y-intercept of this function represent?

- 2) The average amount of electricity consumed by a household in a day is strongly correlated to the average daily temperature for that day. This relationship is given by $y = 0.46x + 6.17$ where x is the temperature in $^{\circ}\text{F}$ and y is the amount of electricity consumed in kilowatt-hours (kWh).

- a) What does the slope of the line represent?
- b) What does the y-intercept of this function represent?
