

Consider each polar equation over the given interval. Classify the curve; determine if the graph is symmetric with respect to the origin, polar axis, and line $\theta=\pi/2$; find the values of θ where r is zero; find the maximum $|r|$ value and the values of θ where this occurs; and sketch the graph.

5) $r = 6\sin(3\theta), 0 \leq \theta < \pi$

6) $r^2 = 36\cos(2\theta), 0 \leq \theta < 2\pi$
