

A particle moves along a horizontal line. Its position function is $s(t)$ for $t \geq 0$. For each problem, find the velocity at the given value for t . The graph of $s(t)$ is provided. Use the blank graph to sketch $v(t)$.

3) $s(t) = t^2 - 4t - 60$; at $t = 5$

4) $s(t) = t^3 - 20t^2 + 100t$; at $t = 4$
